

Marco Chavez Jr, Software Developer

Clovis, United States, 5596822888, marcode.chavez.jr@gmail.com

PROFILE

Dependable and reliable Full-Stack Software Developer with 6+ years of experience driving accessibility, performance, and maintainability across web and mobile applications. Skilled in JavaScript/TypeScript, React, Vue, Node.js, and API integrations, with a track record of delivering scalable solutions that improve both user experience and business outcomes.

Delivered over 15 projects from concept to launch, balancing speed with long-term maintainability

Conducted and resolved accessibility audits, ensuring WCAG compliance and inclusive design

Spearheaded performance improvements achieving a 40% increase in workflows

Built scalable component libraries and led codebase modernization to improve developer velocity

I thrive in environments that value autonomy, mentorship, and problem-solving, where every change can make a meaningful impact on both the team and the user base.

EMPLOYMENT HISTORY

Jul 2023 — Aug 2025

Software Engineer, Pressed Juicery

Clovis

- Developed and scaled customer-facing web applications using JavaScript, TypeScript, Vue, REST, and GraphQL, supporting thousands of daily transactions.
- Built internal marketing and operations tools that reduced manual workflows by ~30%, accelerating campaign launches and reporting.
- Co-created shared component libraries with npm workspaces, enabling cross-platform reuse and cutting feature delivery times by 25% for web and mobile teams.
- Improved and streamlined key customer workflows, driving higher conversion rates and measurable improvements to customer satisfaction and retention.
- Took ownership of projects in a fast-paced Agile environment, including optimizing APIs and leading PostgreSQL data migrations that supported multi-department operations.
- Resolved 50+ accessibility audit issues by embedding WCAG standards into development, ensuring ADA compliance and inclusive user experiences.

Sep 2021 — Jun 2023

Lead Software Developer, Bitwise Industries

Fresno

- Spearheaded frontend modernization, migrating legacy Angular applications to React + Next.js, improving long-term maintainability, cutting build times, and accelerating developer onboarding.
- Led and mentored a team of 6 junior/apprentice developers, providing guidance in TypeScript, accessibility (WCAG 2.1 AA), and automated testing best practices.
- Improved release confidence by driving adoption of automated testing, achieving a 45% increase in test coverage across applications.
- Designed and improved UI consistency and accelerating feature delivery across multiple client projects.
- Partnered with product managers and designers to translate business needs into technical roadmaps, ensuring alignment between stakeholders and engineering deliverables.
- Drove architectural decisions, established coding standards, and implemented CI/CD pipelines, reducing bottlenecks in deployment.
- Promoted collaboration by encouraging developers to leverage QA teams effectively, strengthening testing workflows and product reliability.

May 2022 — Jan 2023

Course Instructor, Bitwise Industries

Fresno

- Collaborated with colleagues to refine teaching strategies and optimize content delivery methods.
- Organized and facilitated group discussions to encourage critical thinking and problem-solving.
- Delivered instruction in React, SQL, NoSQL, TypeScript, JavaScript, and Unit Testing, tailoring lessons to diverse learning needs.

Apr 2020 — Sep 2021

Software Developer, Ordrslip

Fresno

- Developed applications using React, Python, and CSS, delivering scalable and user-friendly solutions for diverse business needs.

- Collaborated with developers to design, develop, and test programs, ensuring alignment with project goals and technical standards.
- Designed and implemented new features and enhanced existing software, improving product functionality and usability.
- Optimized code for performance, scalability, reliability, security, and maintainability, reducing technical debt and improving long-term efficiency.
- Utilized Git for version control, supporting efficient collaboration, streamlined workflows, and accurate project history tracking.
- Participated in technical discussions, providing insights and solutions that guided architectural and development decisions.
- Built and integrated APIs with external services, expanding system capabilities and improving user experience.
- Created internal tools to track sales metrics, enabling data-driven decision-making for marketing strategies.
- Maintained and improved a scalable SaaS application, ensuring consistent performance, uptime, and user satisfaction.
- Produced well-structured, testable code, supporting maintainability and reducing future development costs.

EDUCATION

Jul 2018 — Jul 2019

Certificate of completion - Software Development, Southern Careers Institute of Texas

Completed an intensive Full-Stack Software Development program, gaining hands-on experience with front-end (HTML, CSS, JavaScript, React) and back-end (Node.js, SQL, APIs) technologies. Demonstrated such strong technical performance and leadership that I was invited to serve as an instructor during the program, mentoring peers, reviewing code, and guiding student projects. Built and deployed multiple full-stack applications, while developing a reputation for collaboration, problem-solving, and helping others grow in their development careers.

SKILLS	TypeScript	Expert	Accessibility	Expert
	GraphQL	Expert	Cloud Technologies	Skillful
	AI Fluency	Expert	Mobile App Development	Expert
	Git	Expert	PostgreSQL	Expert
	Docker	Expert		

LANGUAGES	English	Native speaker	Spanish	Highly proficient
